

Use Case: Report Incident with Items for Exercise

Main flow:

1. The user selects the “Report Incident with Items for exercise” option from the menu.
2. The system displays a list of all the items in the gym and their information (name, type, location, and description of the item).
3. The user selects at least one or more affected items and clicks the “Next” button.
4. The system shows the selected items’ information (name, type, location, description) and requests the user to provide a title for the incident, when this was detected, which exercise he was doing (all mandatory), and to select a priority level (mandatory) and a description (optional) for each item.
5. The user fills in the data and clicks the “Submit Incident” button.
6. The system shows a message indicating that the incident has been reported and its state is submitted, the details of the incident (title given, date of the incident, the exercise, and name of the reporter) as well as for the affected items their information (name, type, location, description of the item, given priority level).

Alternative flow 1 – to step 2:

If there aren’t any available items or all of them have some pending incident, the system notifies the user and prompts them to return to the main menu.

Alternative flow 2 – to step 2:

- 1.1. The system provides the user with the option to filter this list by name or location.
- 1.2. The user selects the criterium to use to order the list.
- 1.3. The system displays the list again, now sorted according to the user’s selection.

Alternative flow 3 – to step 4:

If the user hasn’t selected any items, the system returns to step 2 and requests the user to select at least one item to continue.

Alternative flow 4 – to step 5:

The user selects to modify the list of selected items returning the system to step 2.

Alternative flow 5 – to step 6:

If the mandatory data are not filled in, the system informs the user and returns to step 4.

Pre-condition

The ApplicationUser is logged-in with role User.
